
Advance Point Of Sale System (POS) Rarl

n, r.post.tion. For a description of the new Gary Mooredy as part. of the Advanced Point of Sale (POS) Rolling Advance Plan Project/Advance Land Acquisition Revolving Fund (ALARF) at the Texas A&M University System. Part Of Supportor Plan Page 2 28 Regent Avenue Sugar Land, Texas 1 5. (843) 981-7700 inclusion of all of the above. 4. In several of these categories, improved performance has depended on successful completion of pilot projects. These projects have demonstrated the technology and provided early system pilots for bench, street, and point-of-sale sams. The maturity of selected CDT products has been enhanced by observing the response of end-users to "pilot" equipment. In fact, the Department reported in the FY14 Annual Plan that more than \$20 million of its budgeted funds were incurred with. the University. of Texas Health Science Center at San Antonio in the form of CDT and related equipment. Technologies and software also used in these areas include operational processing systems, such as advanced and im- ported software; wireless and Internet technologies; commercial quality POS terminals and customer-facing systems, such as ATMs, kiosks, and single-user self-service terminals (SUSSETS); and dynamic and event-based detection and alert systems (for health care facilities).. Response to budgetary uncertainty. UT System could not forecast demand for CDT or state system funding. In fact, the budget process has some-times limited the availability of CDT grant funds. Several end users reported that funding for CDT activities was often interrupted during fie md grant cycle; for example, one site reported having a CDT budget decrease by 42.9 percent over the course of four years. Several end users also reported that CDT activities were unfunded at times when much of the state budget was unspent. In this case, these end users may have been forced to go "below the line" in requests for support from other state agencies or other sources of CDT funds.. In states where budget shortfalls exist, the Department has sometimes limited the availability of CDT funds for the development of new applications or maintenance of existing applications.. Trend toward multi-application point-of-sale systems. Older single-application models seem to be being replaced with multi-application models. New models being installed are in fact multi-application models and the older models
